ASSIGNMENT 2

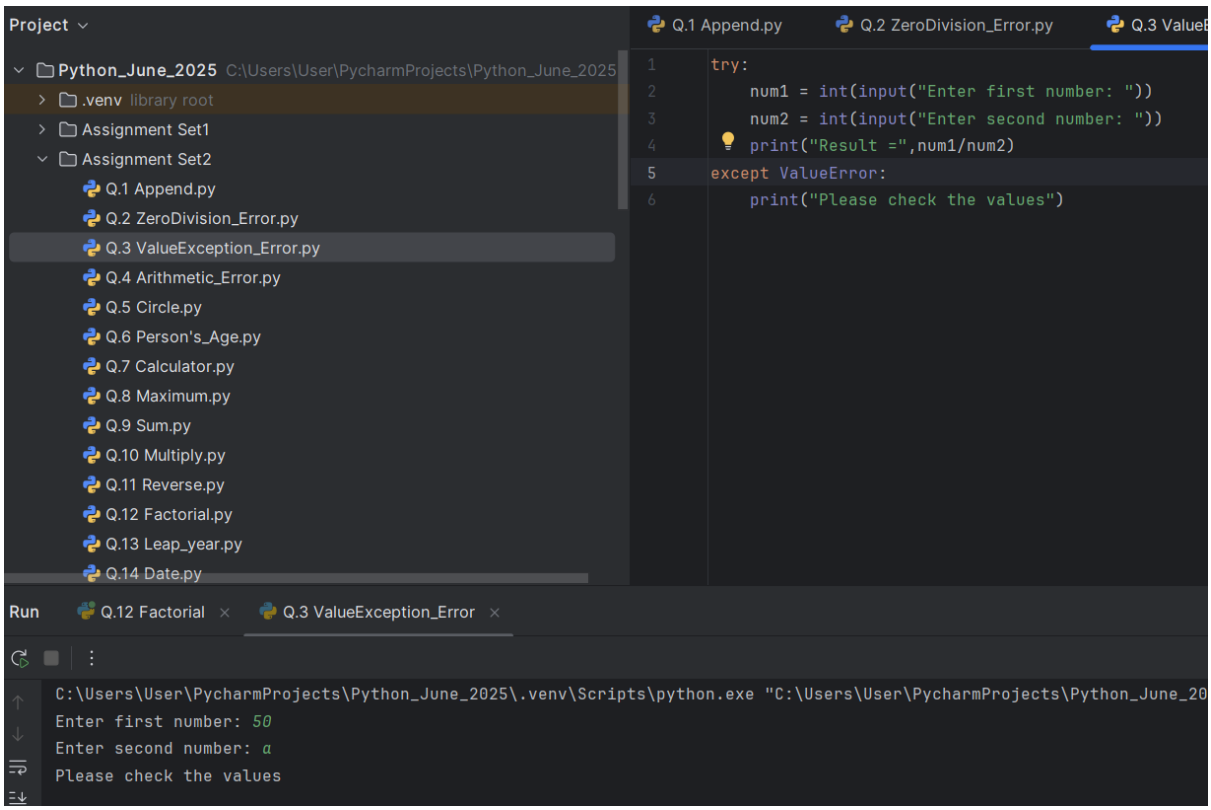

1. Write a Python program to append a new item to the end of the array.

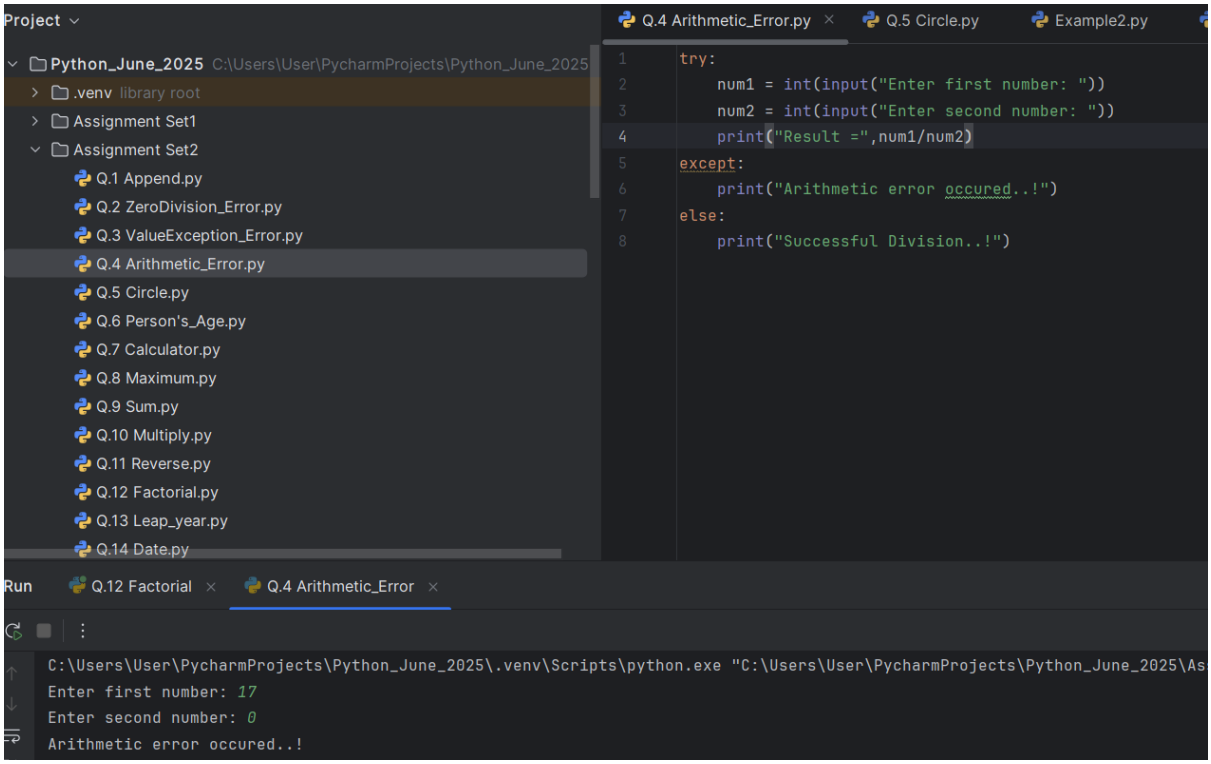

2. Write a Python program to handle a ZeroDivisionError exception when dividing a number by zero.

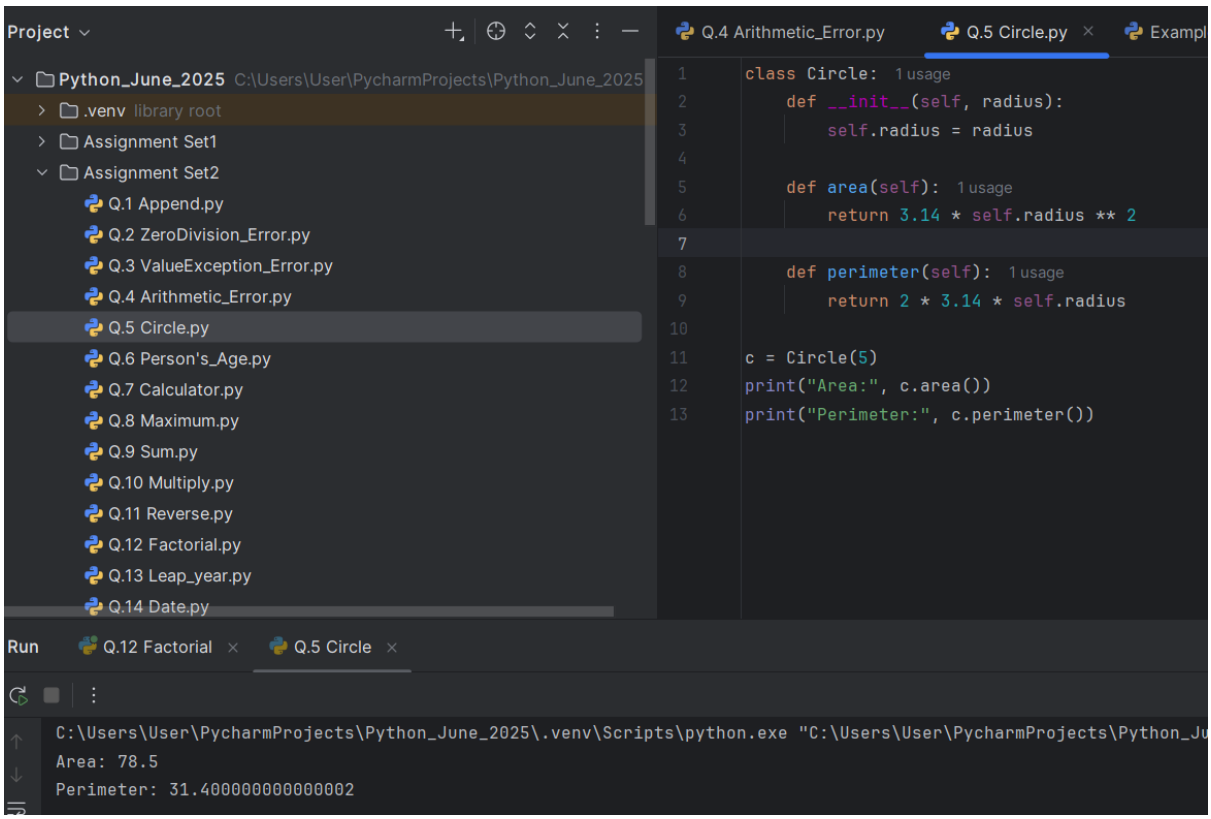

3. Write a Python program that prompts the user to input an integer and raises a ValueError exception if the input is not a valid integer.

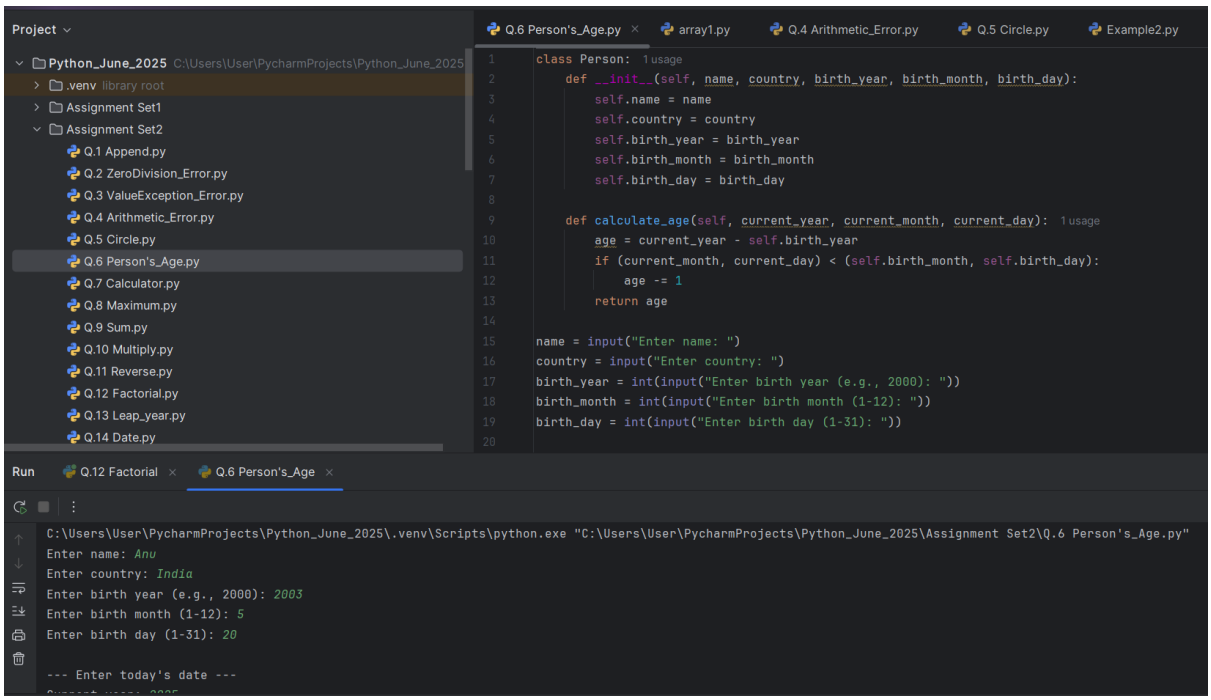

4. Write a Python program that executes division and handles an ArithmeticError exception if there is an arithmetic error.

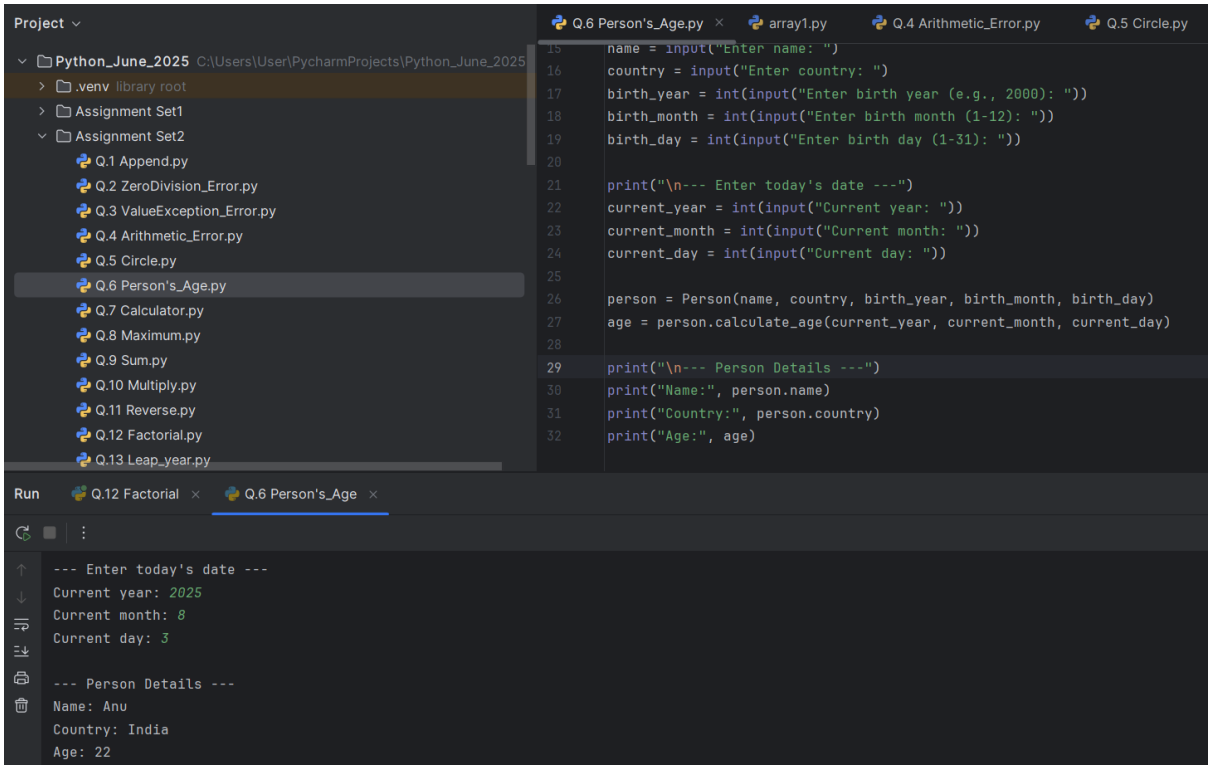

5. Write a Python program to create a class representing a Circle. Include methods to calculate its area and perimeter.

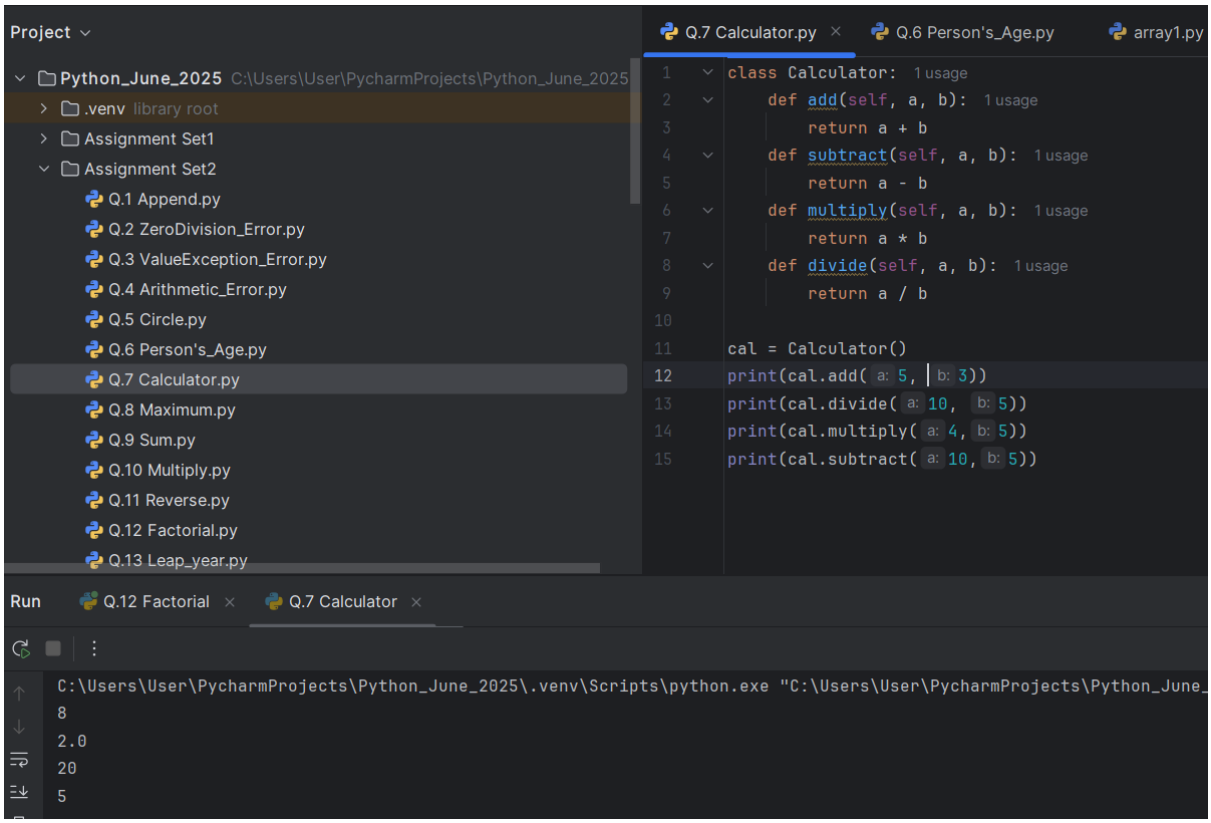

6. Write a Python program to create a person class. Include attributes like name, country and date of birth. Implement a method to determine the person's age.

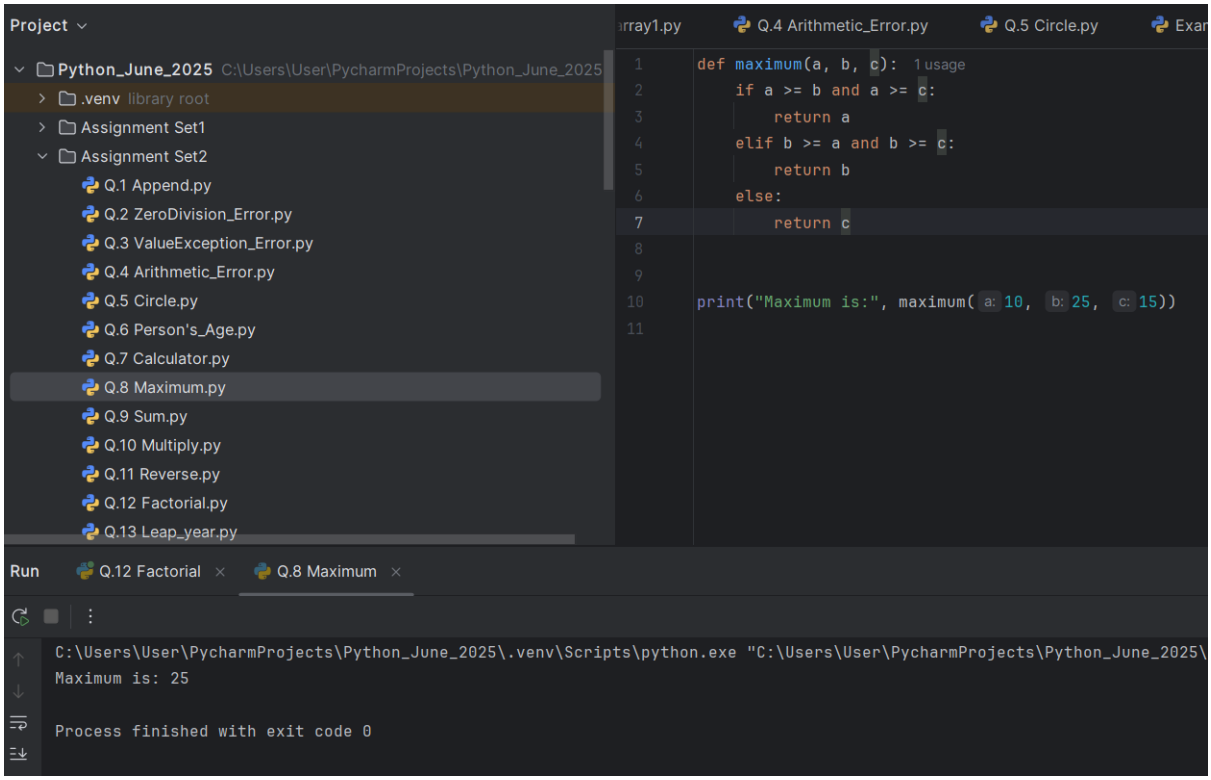

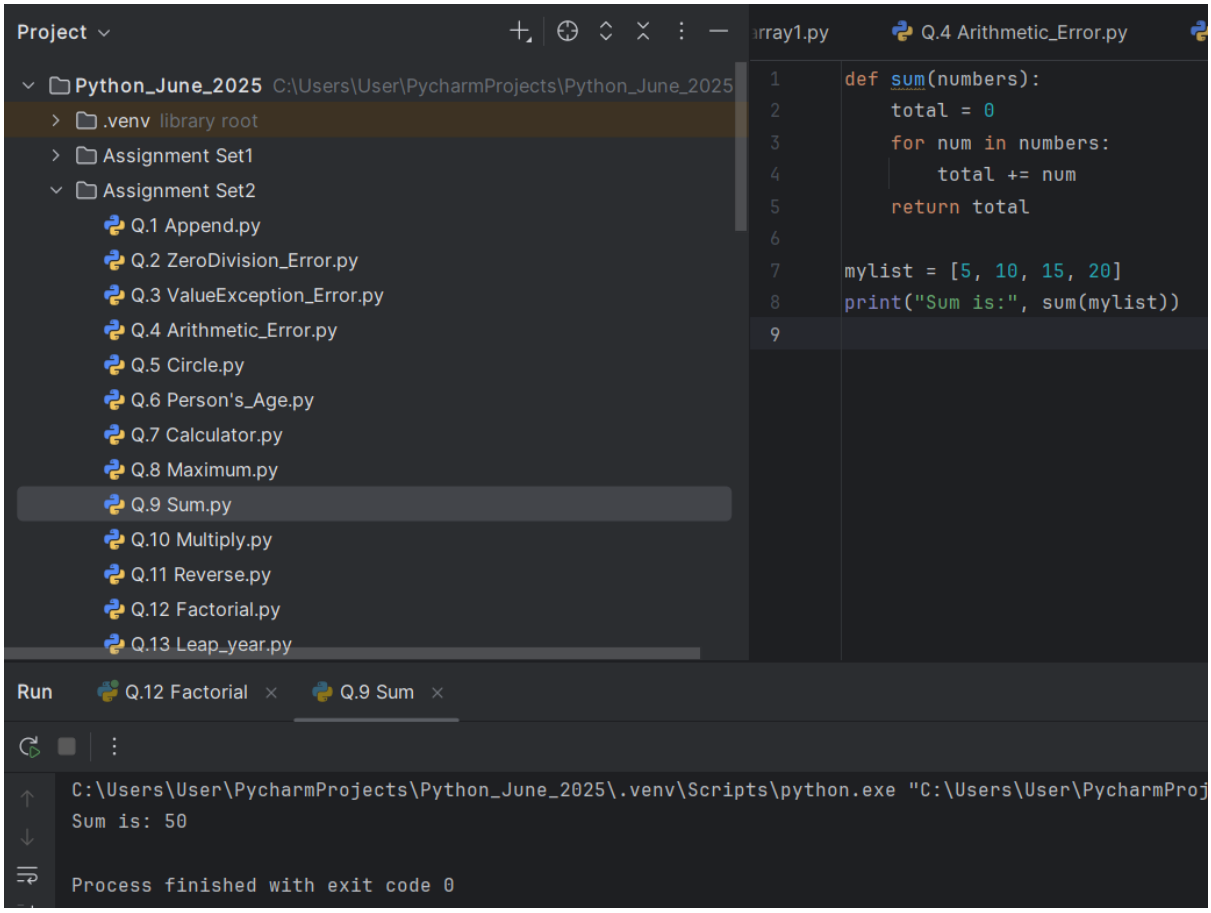

7. Write a Python program to create a calculator class. Include methods for basic arithmetic operations.

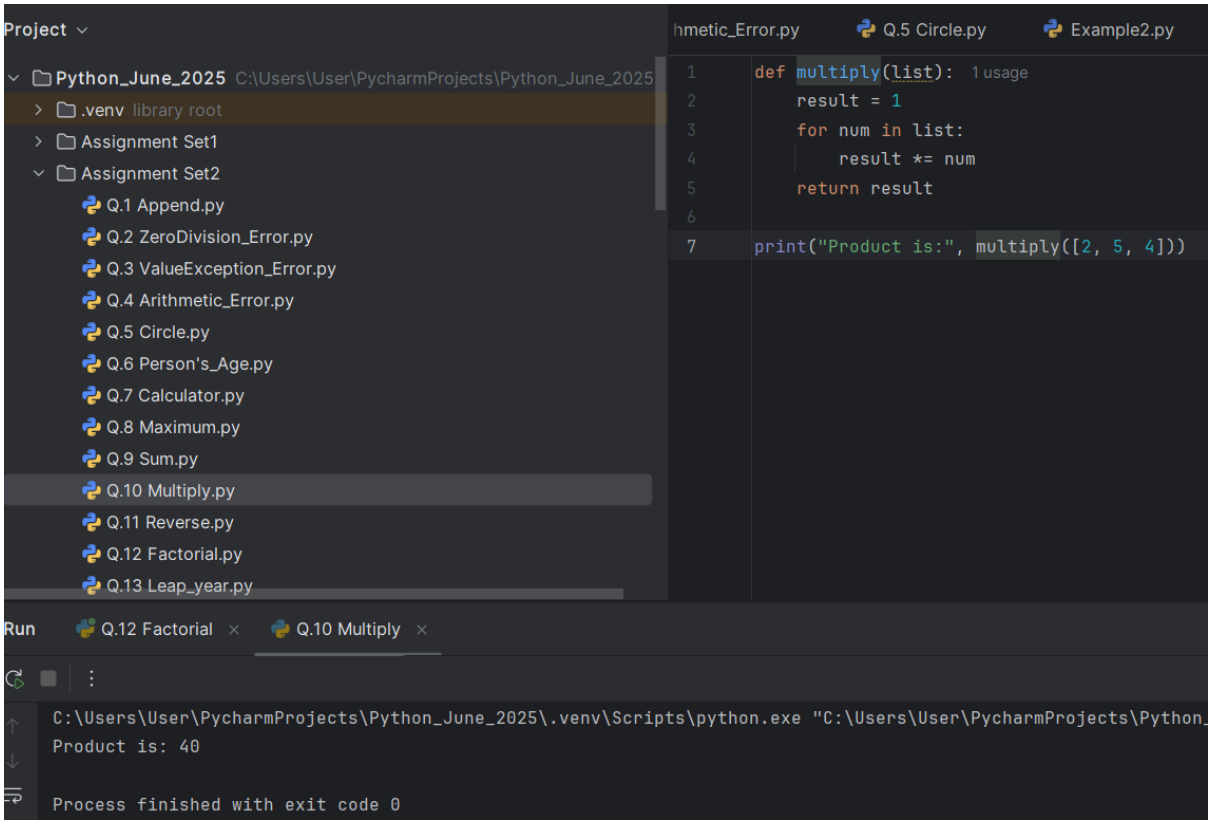

8. Write a Python function to find the maximum of three numbers.

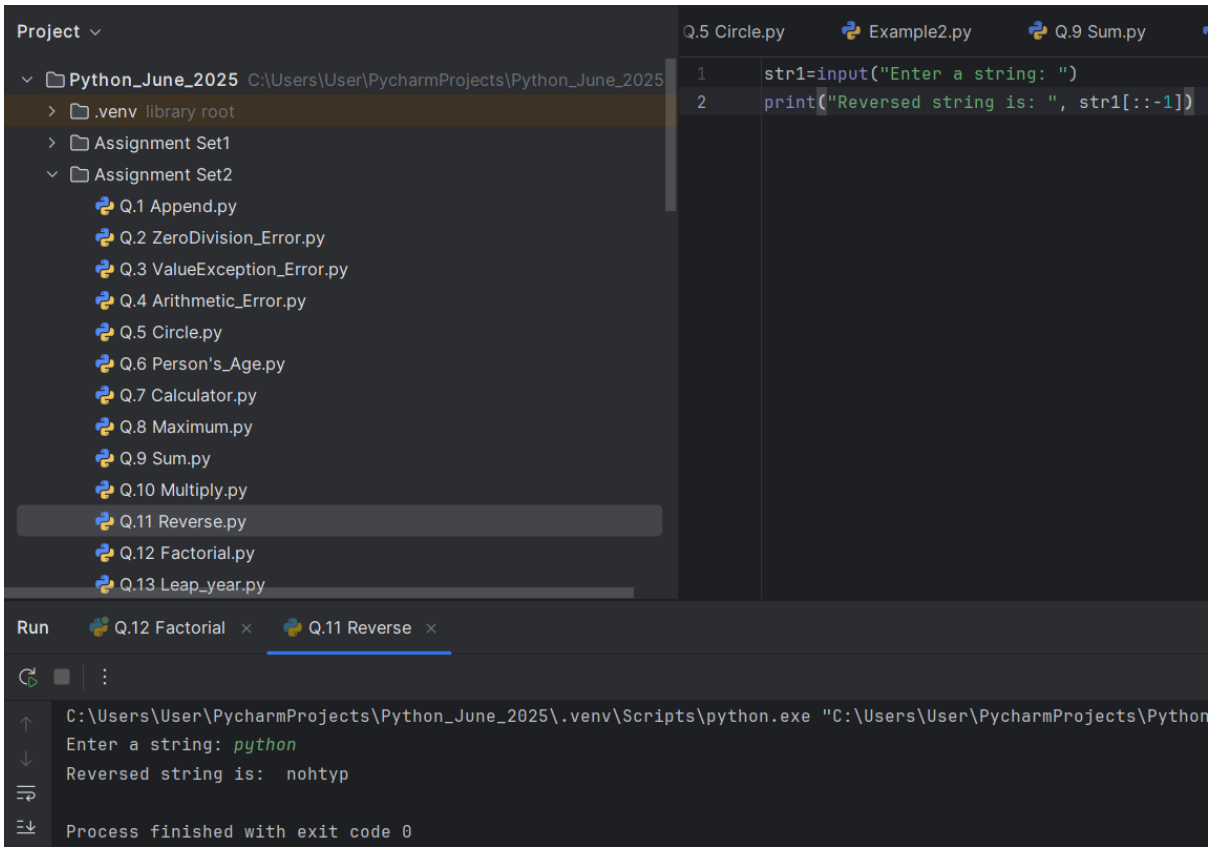

9. Write a Python function to sum all the numbers in a list.

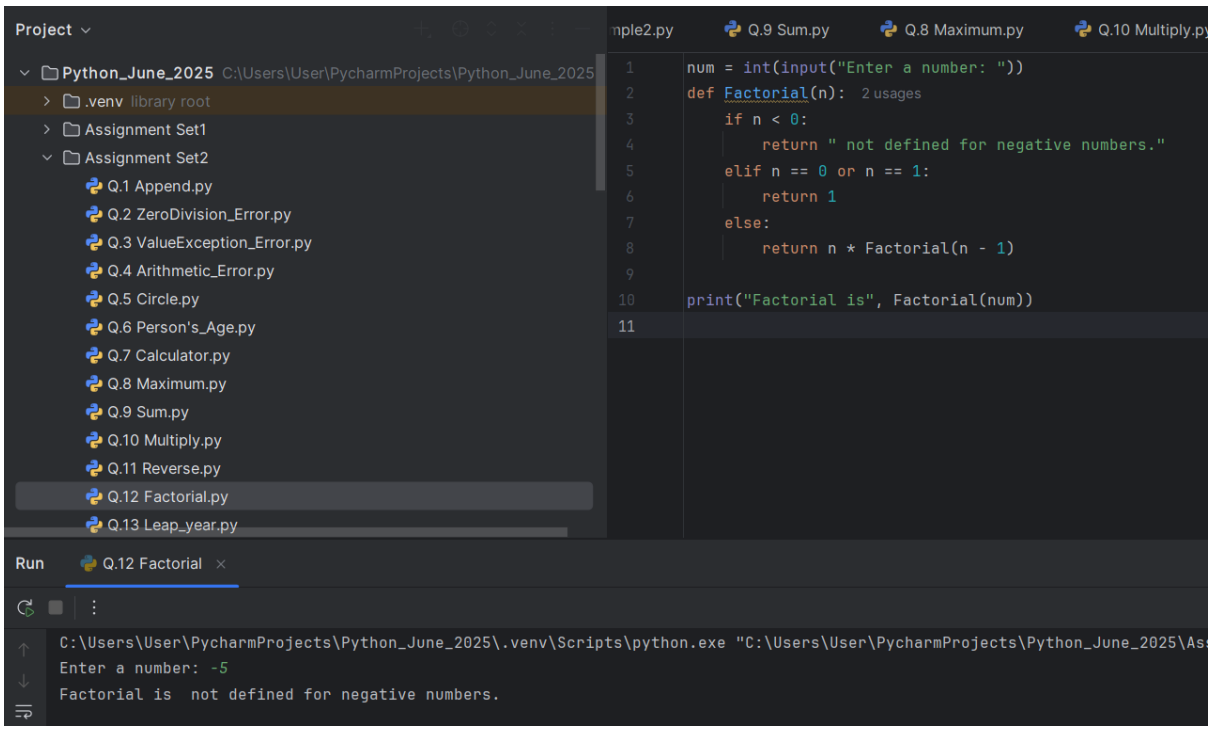

10. Write a Python function to multiply all the numbers in a list.

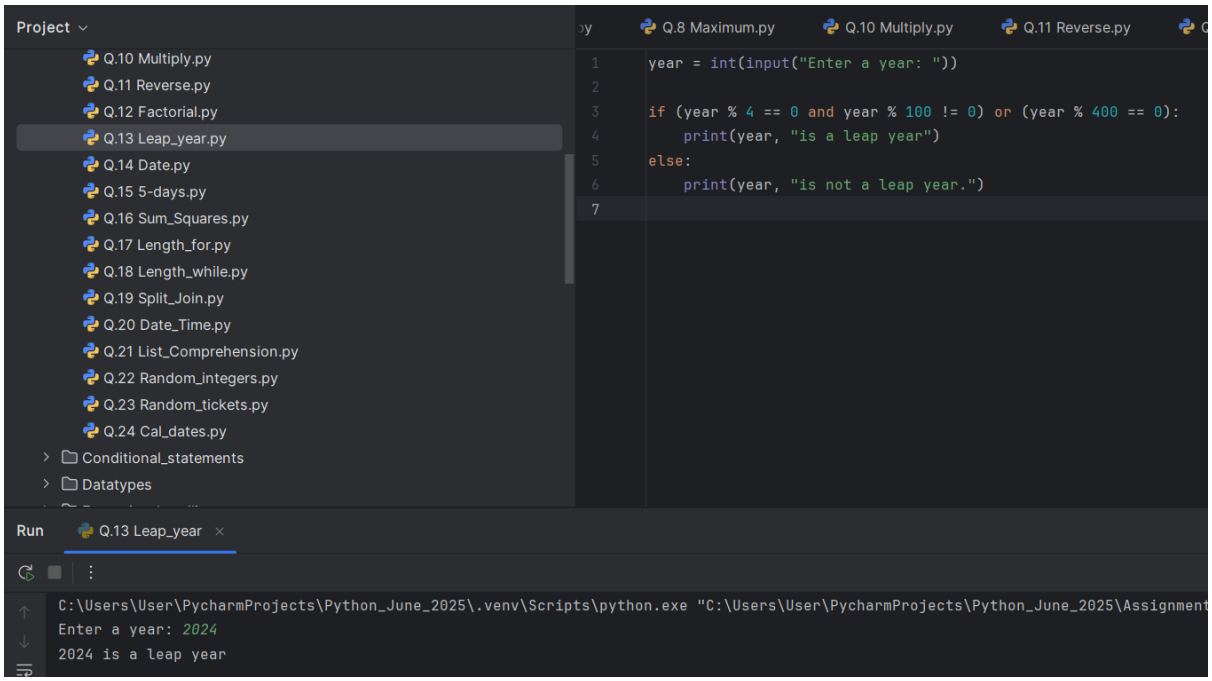

11. Write a Python program to reverse a string.

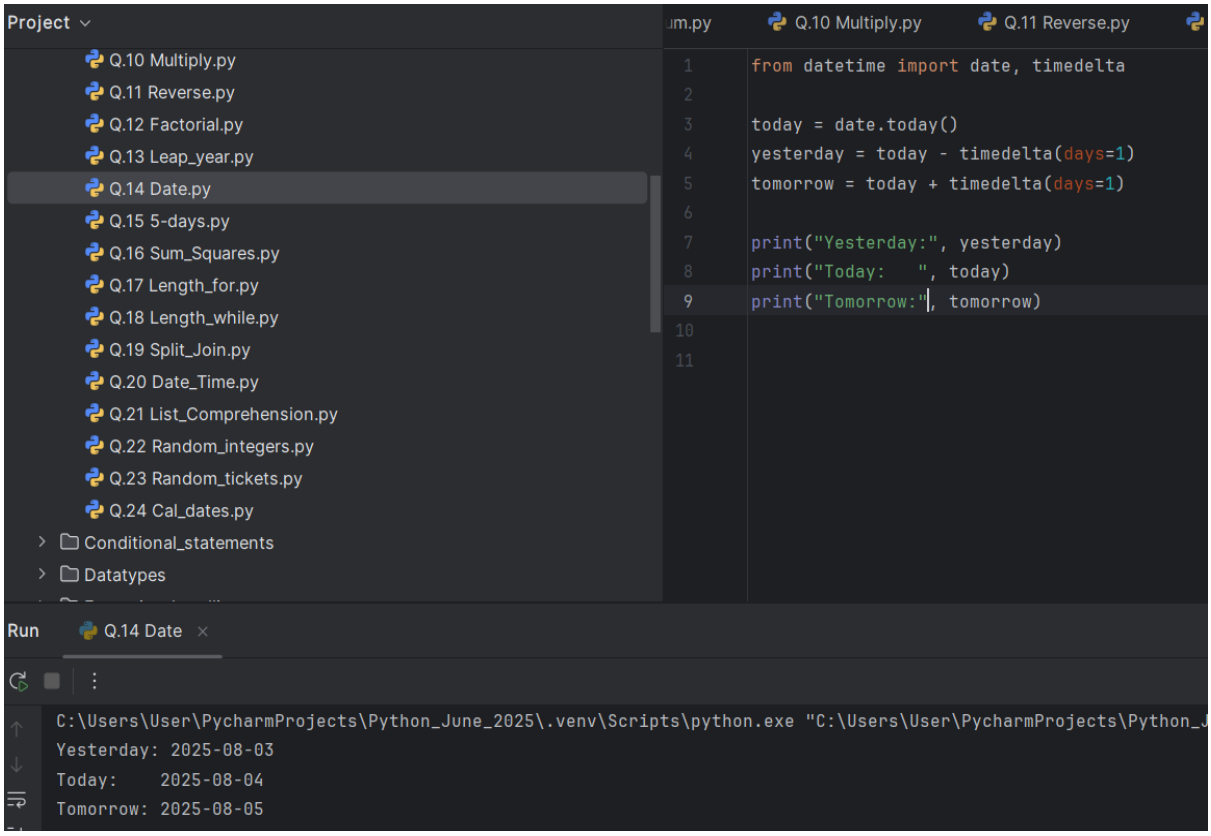

12. Write a Python function to calculate the factorial of a number (a non-negative integer).

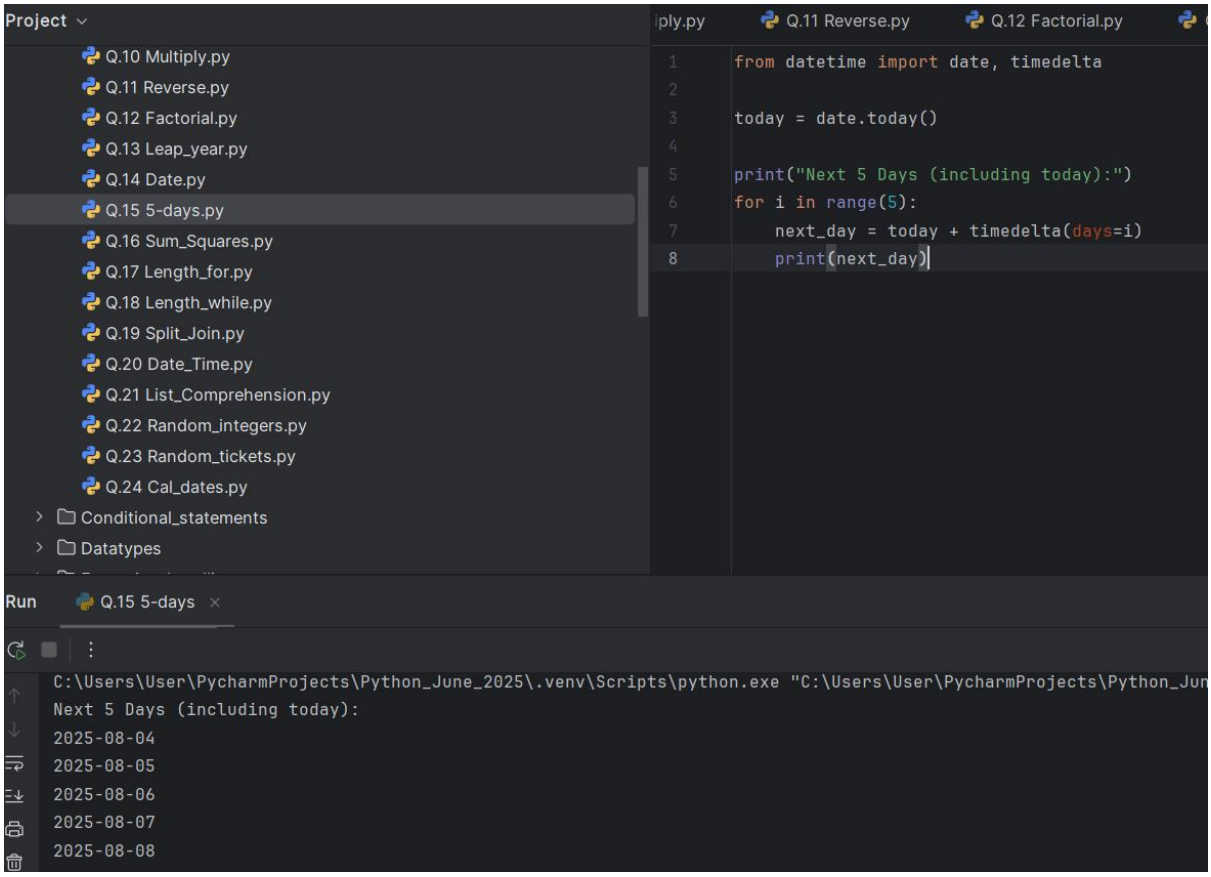

13. Write a Python program to determine whether a given year is a leap year.

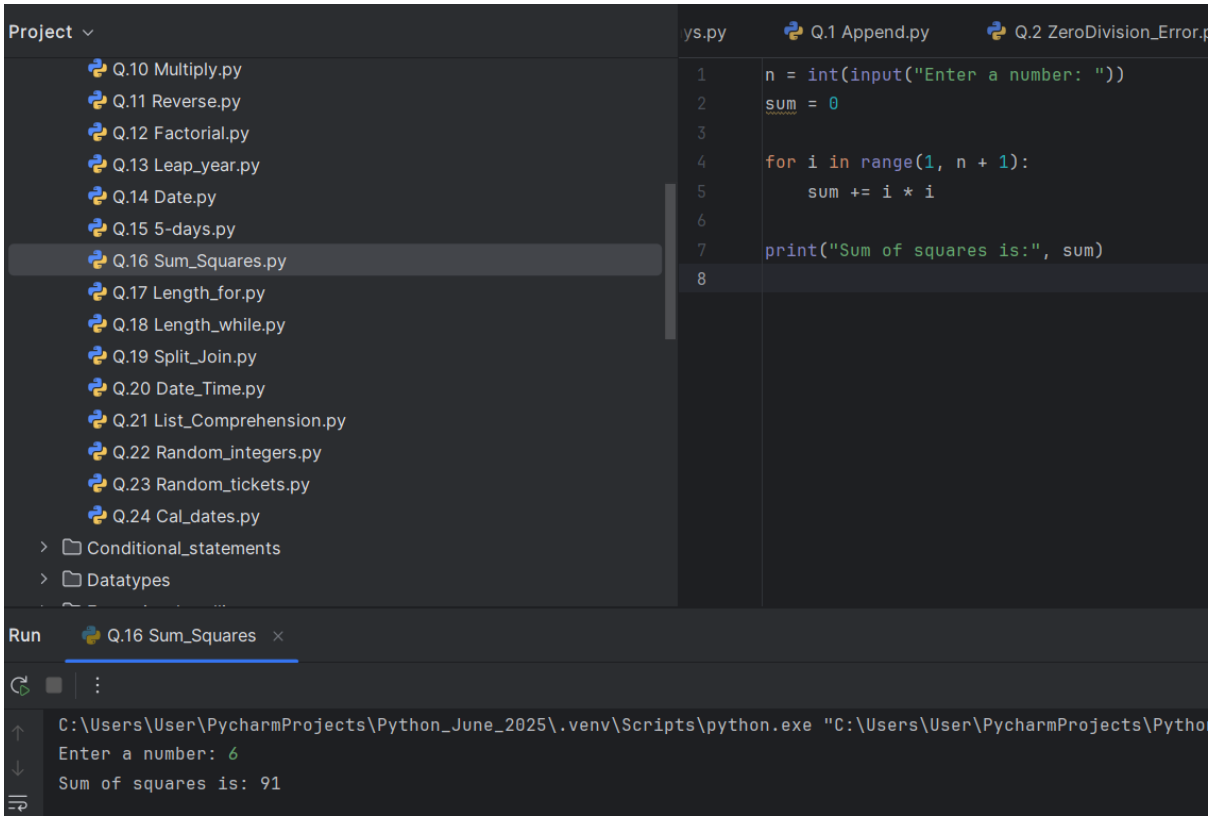

14. Write a Python program to print yesterday, today, tomorrow.

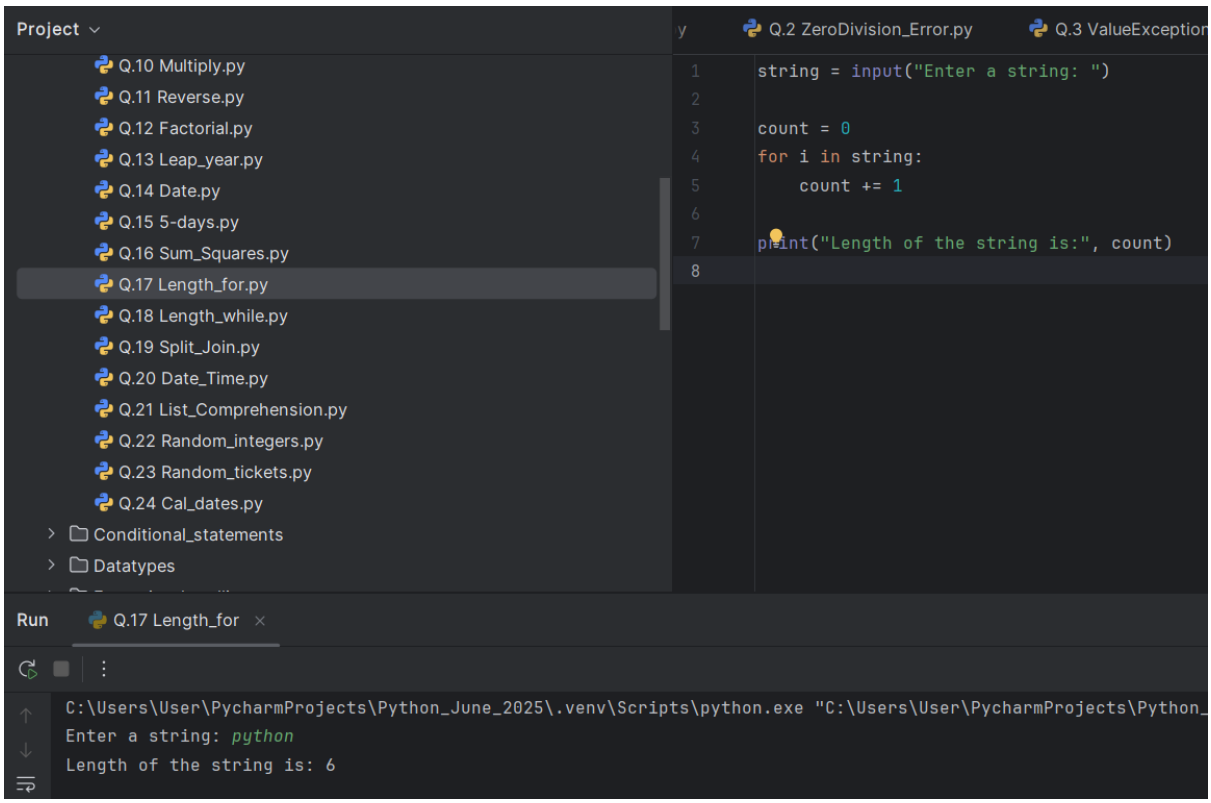

15. Write a Python program to print the next 5 days starting today.

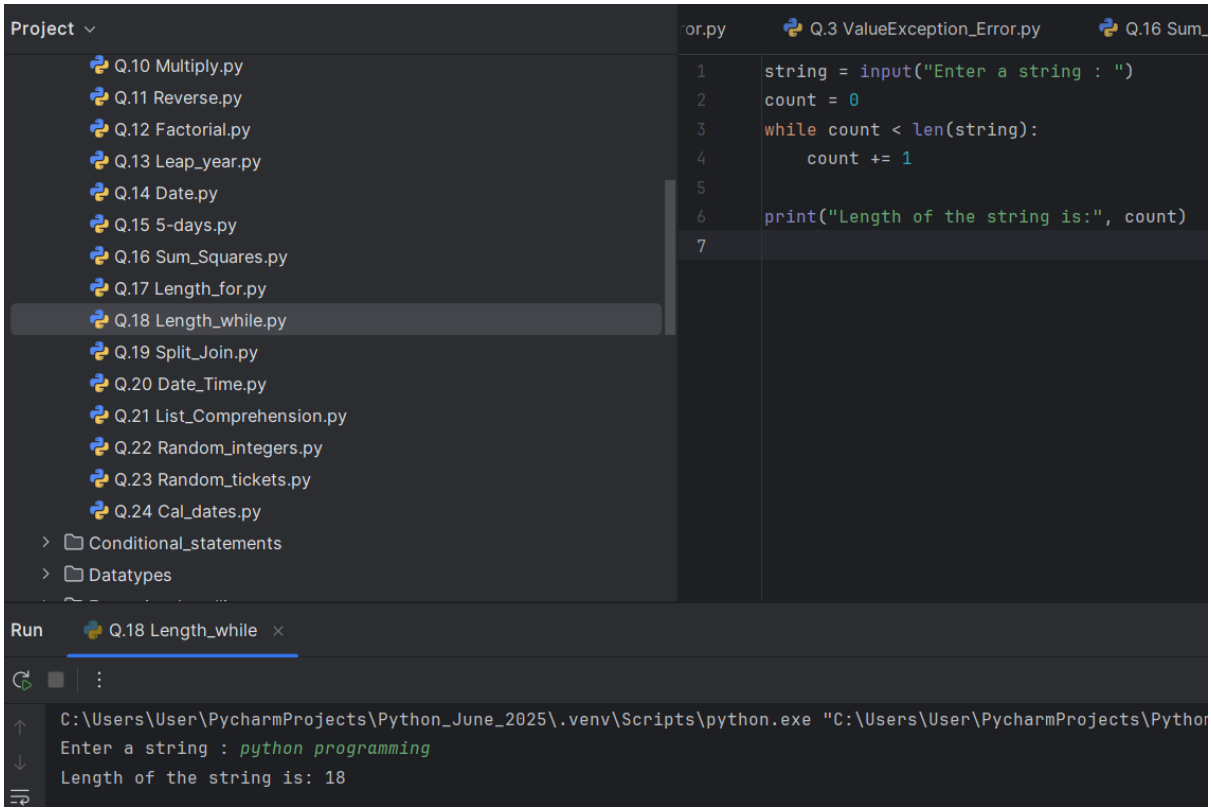

16. Python Program for Sum of squares of first n natural numbers

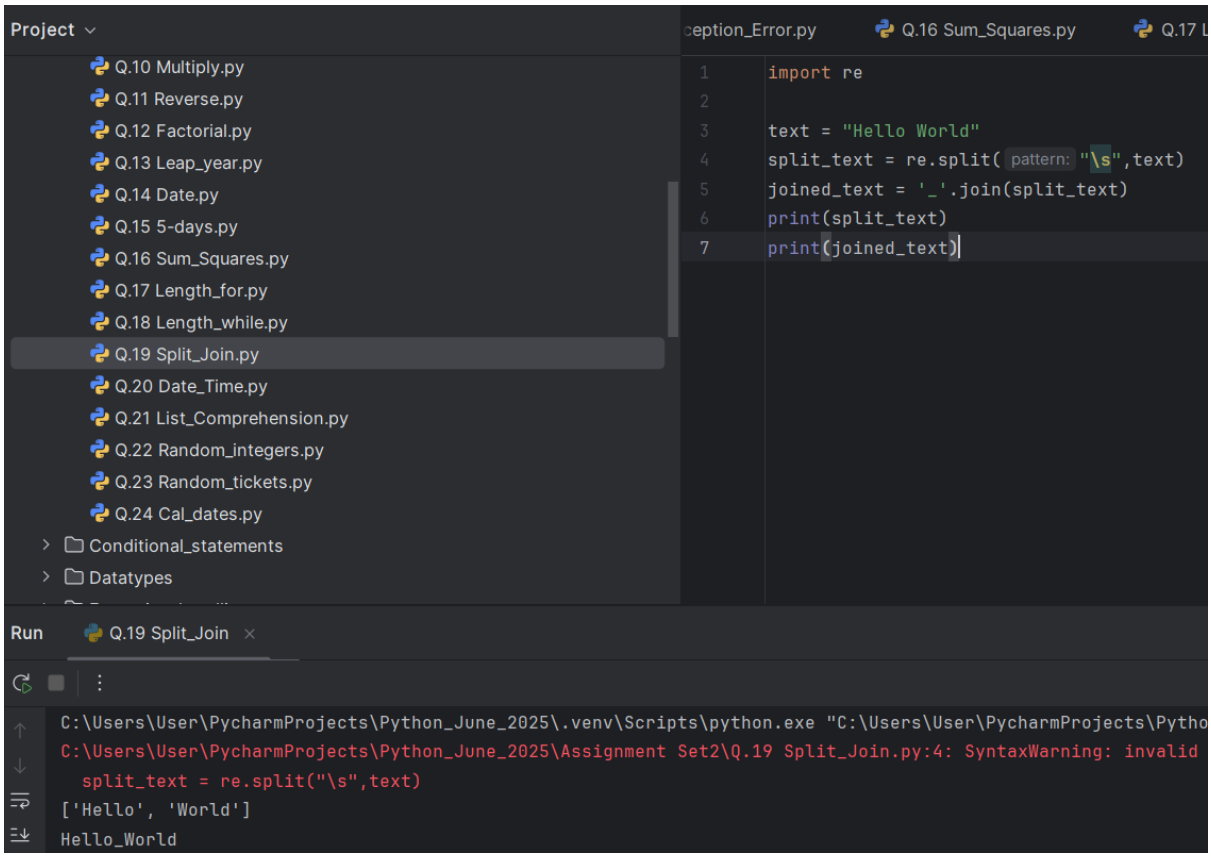

17. Find length of a string in python using for loop.

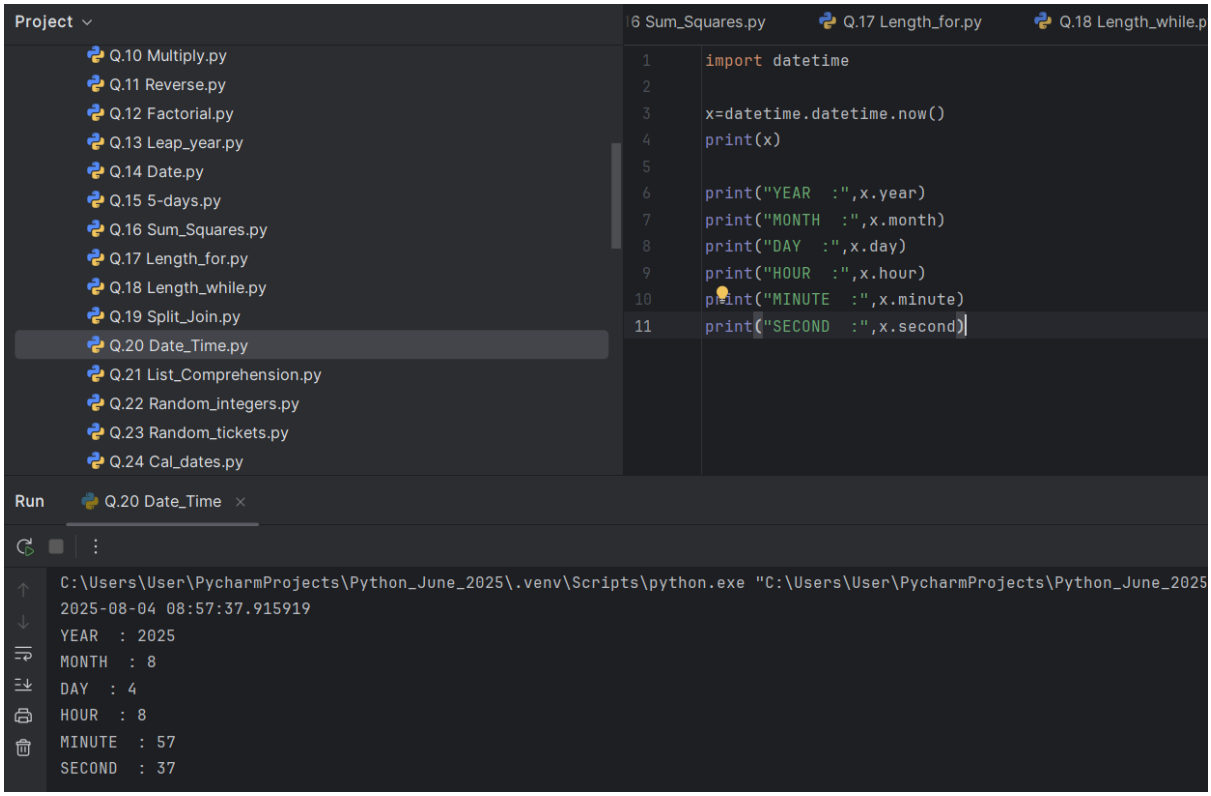

18. Find length of a string in python using while loop.

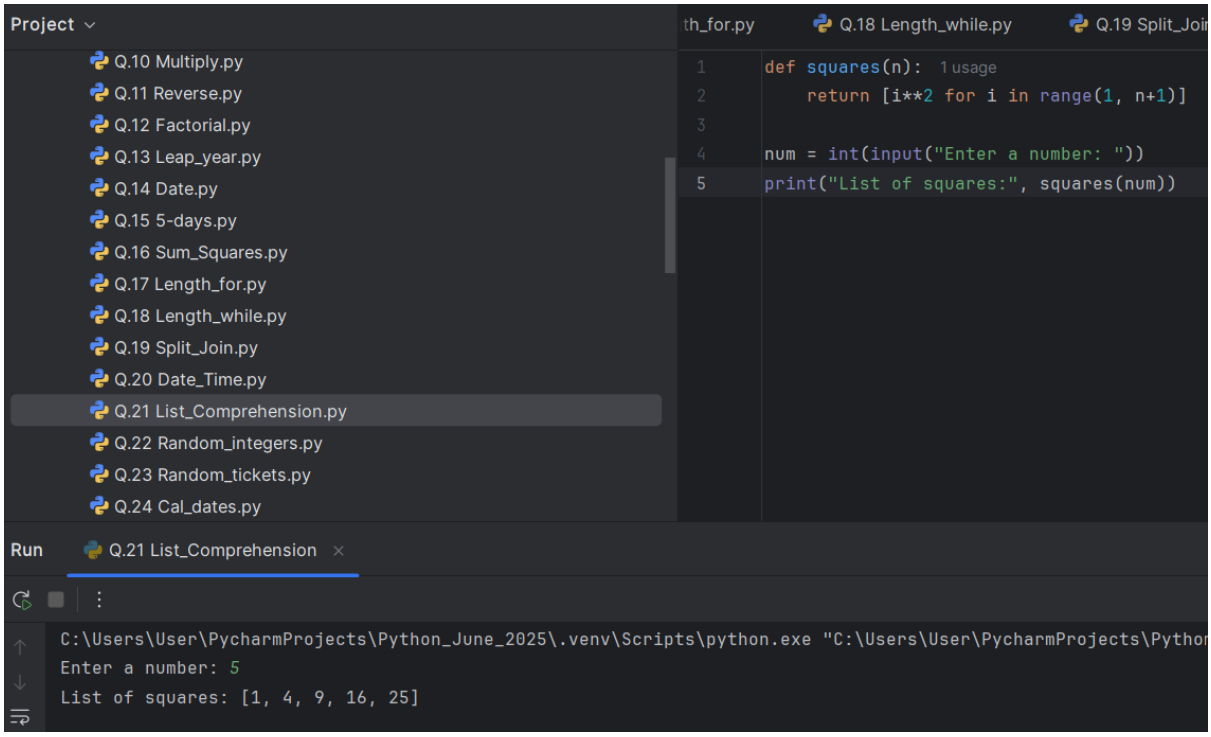

19. Python program to split and join a string

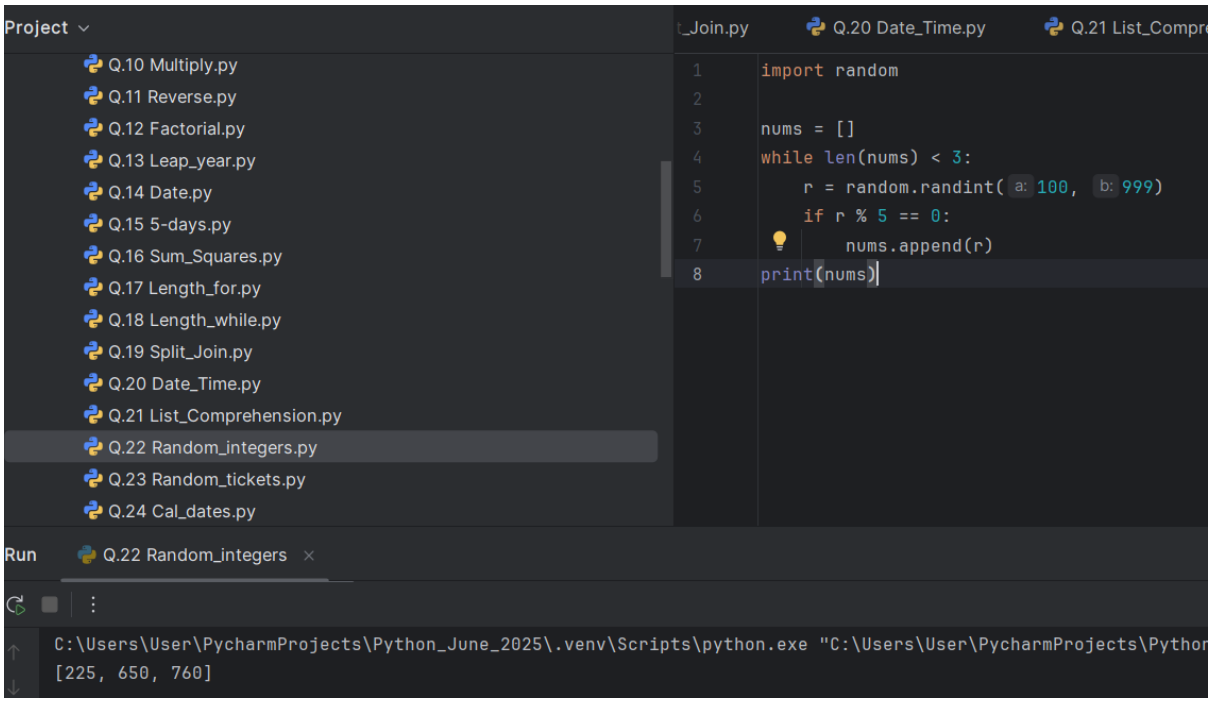

20. Get Current Date and Time using Python

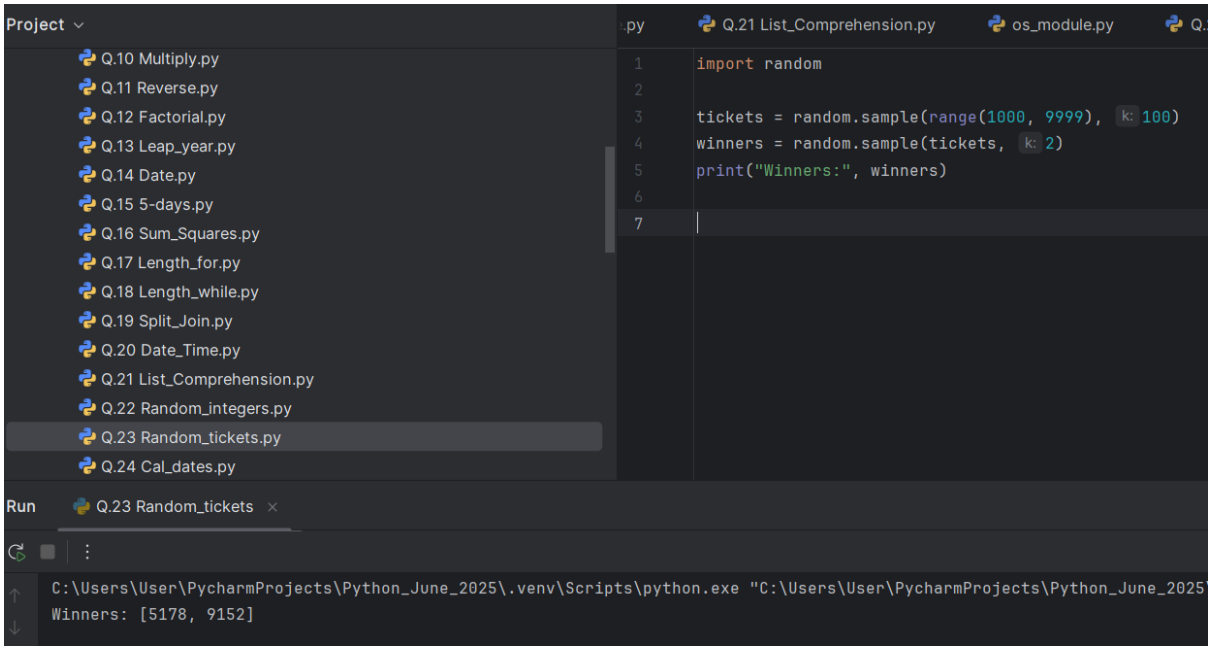

21. Create a function to generate a list of squares of numbers from 1 to n using list comprehension.

22. Generate 3 random integers between 100 and 999 which is divisible by 5

23. Generate 100 random lottery tickets and pick two lucky tickets from it as a winner.

24. Calculate number of days between two given dates
